EXPERIMENT 11

APPLICATION DEPLOYMENT

Project: StudyLens – AI Learning Gap Analyzer

Aim

To understand deployment of StudyLens using Zoho Creator.

Introduction

Deployment makes an application available to intended users. Forms, permissions, data handling, and user experience should be checked before sharing.

Deployment Procedure

- Review implemented StudyLens forms.
- Test form submission and report visibility using sample records.
- Confirm user permissions and data-sharing settings.
- Remove test records that should not be visible to real users.
- Use Zoho Creator share or publish settings available to the account.
- Test the shared application with an account representing the intended user.

Deployment Status

The supplied screenshot showed a trial-expired notice. This document describes a deployment procedure and does not claim StudyLens is currently deployed or publicly accessible.

Result

A deployment checklist was documented. Confirm deployment only after access and functionality are tested in the active environment.
