EXPERIMENT 12

APPLICATION MIGRATION AND PORTABILITY

Project: StudyLens – AI Learning Gap Analyzer

Aim

To study considerations for moving StudyLens data and components to another environment.

Introduction

Migration may be required when an application changes platform, account, environment, or ownership. Moving data does not automatically transfer every form, workflow, permission, or report.

Migration Planning

- List forms and fields that exist in the current application.
- Export only data permitted by the platform and account.
- Keep exported records in a secure backup.
- Document field names, dropdown values, and lookup relationships.
- Recreate forms, reports, and workflows in the destination environment.
- Compare record counts and sample records after import.
- Test permissions and workflows again after migration.

StudyLens Considerations

Student names, emails, assessment scores, and learning information must be handled carefully during export and migration. Use sample data for demonstrations when possible.

Result

A migration checklist was prepared. Migration is complete only after data integrity and application behaviour are verified.
