Experiment 4 — Data Modelling and Form Design

StudyLens — AI Learning Gap Analyzer uses structured forms to capture student profiles and connect them with subjects, topics, assessments, results, and study plans.

Aim

To design the StudyLens student data model and create the Students form in Zoho Creator using suitable field types.

Application

StudyLens — AI Learning Gap Analyzer

Students Form — Fields

Used

Field Type	Field Name
Name	Full_Name
Email	Email
Dropdown / Choice	Course
Dropdown	Year_of_Study
Multi Line	Learning_Goal
Lookup (planned)	Subject
Lookup (planned)	Topic
Number (planned)	Marks_Obtained

Field Type	Field Name
Date	Assessment_Date
Number	Total_Marks
Number	Marks_Obtained
Lookup	Student
Lookup	Subject

These fields capture the core student profile shown in the current StudyLens application screenshot.

Form Sections

Section A – Student Details

- Full Name
- Course
- Year of Study

Section B – Contact Details

- Email
- Contact Number (future field)
- Learning Goal

Section C – Learning Structure

- Assessment Score (future field)
- Subject
- Topics
- Learning Goal / Notes

Section D – Assessment and Study Planning

- Assessment Date (future field)

- Study Plan Due Time (future field)
- Student Consent (if required)

This proposed organization separates student profile data from

learning content and assessment records.

Validation

- Student name, email, course, and year should be required where appropriate. Lookup fields should be used for relationships between students, subjects, topics, assessments, and study plans.
- Email must have a valid email format.
- Assessment total marks must be greater than zero; marks obtained must be within the valid range.
- Assessment dates and study-plan due dates should use Date fields and appropriate validation.
- Validate required fields before saving a record. Apply access

permissions before using real student data.

Workflow

A student profile is saved → StudyLens stores the student record → subjects and topics are linked through Lookup fields → assessment results are recorded → mastery percentages can be calculated → reports can highlight learning gaps and support targeted study plans.

Result

The supplied screenshot confirms that the StudyLens Students form is present in Zoho Creator. Subject, topic, assessment, learning-gap, and study-plan workflows remain to be implemented and tested before they can be reported as complete.

ZOHO CREATOR SCREENSHOTS — STUDYLENS

The following screenshots document the StudyLens forms and report views supplied for this experiment. Screenshots show the current prototype interface; they do not by themselves verify that every workflow is complete.
