# EXPERIMENT 5
# PAGES, REPORTS, DASHBOARDS, AND UI BUILDER

**Project: StudyLens – AI Learning Gap Analyzer**

## Aim

To organize StudyLens data in Zoho Creator by creating user-facing forms, record reports, and a clear navigation structure, and to plan a dashboard/UI page that can present learning progress and learning gaps.

## Application

StudyLens – AI Learning Gap Analyzer

## Platform

Zoho Creator low-code application builder

## Overview

StudyLens is intended to record student profiles, subjects, topics, assessments, assessment results, and recommended study plans. The screenshots below show the current Zoho Creator prototype and its forms/reports. Dashboard metrics and advanced UI components are described as proposed presentation elements unless they are visible in the screenshots.

## Pages and Navigation

The application navigation is organized around the following modules:

- Students – stores the student profile, course, year/drop-down selection, and learning goal.
- Subjects – stores subject name, subject code, and description.
- Topics – stores topic name, linked subject, and difficulty level.
- Assessments – stores assessment name, student, topic, total marks, and assessment date.
- Assessment Results – records the selected assessment, marks obtained, attempt date, and perceived difficulty.
- Study Plans – links a student and topic to recommended tasks, due date, and status.

## Reports Created / Visible in Prototype

| Report | Purpose | Visible fields / data |
|---|---|---|
| All Students | Review saved student records | Full name, email, course, drop-down value, learning goal |
| All Subjects | Review subjects | Subject name, subject code, description |
| All Topics | Review topic records | Topic name, subject, difficulty level |
| All Assessments | Review assessments | Assessment name, student, topic, total marks, date |
| All Assessment Results | Review recorded outcomes | Assessment, marks obtained, attempt date, difficulty |
| All Study Plans | Track learning tasks | Student, topic, recommended tasks, due date, status |

## Dashboard / UI Builder Design

A StudyLens dashboard can combine the saved records into a concise learning overview. The following are recommended dashboard components; they should be treated as design goals unless separately implemented in Zoho Creator:

- Student profile summary and selected learning goal.
- Assessment performance: marks obtained compared with total marks.
- Topic mastery / difficulty overview to help identify weak areas.
- Pending study-plan tasks, due dates, and completion status.
- Subject-wise and topic-wise charts for performance trends.

## Data Relationships and Workflow

The intended workflow is: create a student profile → register subjects → add topics linked to subjects → create assessments linked to students and topics → enter assessment results → use results and topic difficulty to prepare recommended study tasks → review progress in reports and, when configured, a dashboard. Lookup fields should be used for the relationships where supported by the current form setup.

## Validation and Data Quality

- Use required fields for key record identifiers such as student name, subject name, topic name, and assessment name.
- Use an email field with valid email formatting for student contact details.
- Ensure marks obtained are numeric and do not exceed total marks.
- Use valid dates for assessment dates and study-plan due dates.
- Select existing student/topic/assessment records in lookup fields to maintain relationships.

## Screenshots of the StudyLens Zoho Creator Prototype

The following screenshots document the forms and reports visible in the current prototype. The trial-expired banner appears in the captured Zoho interface; this report therefore describes the prototype shown, not a claim that the application is currently deployed for public use.

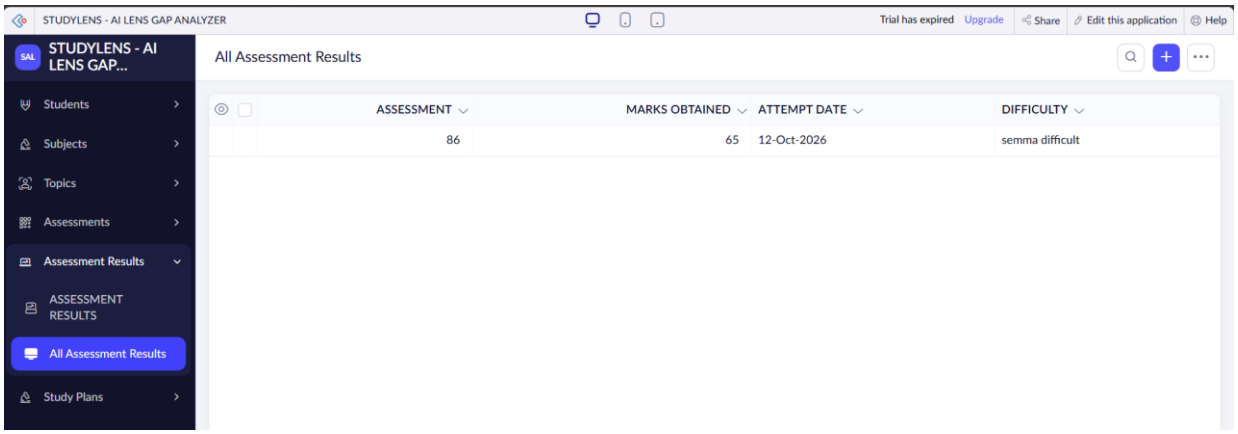

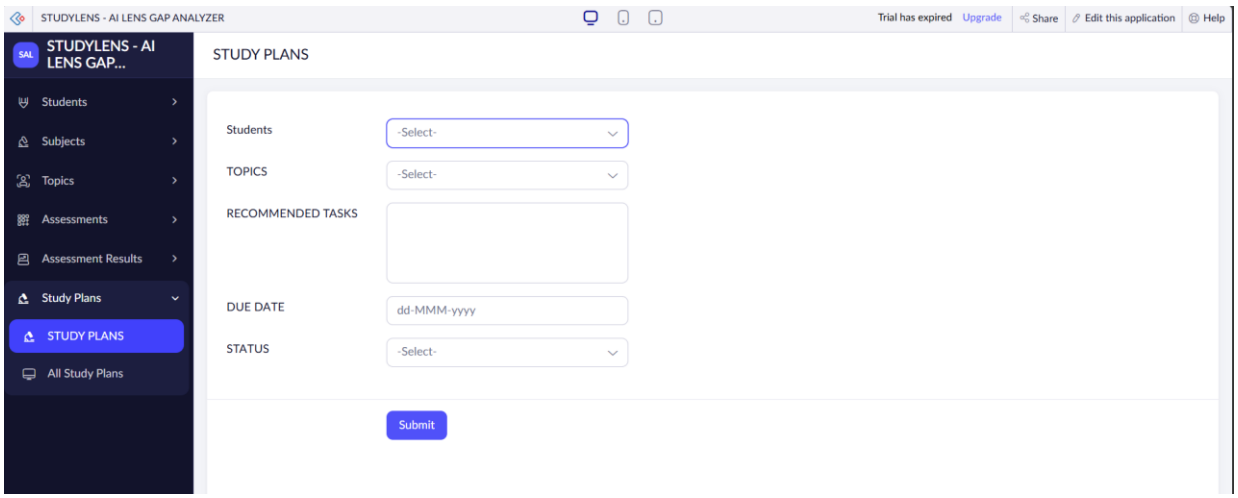

**Figure 12. All Study Plans report**

## Result

The StudyLens prototype includes forms and reports for Students, Subjects, Topics, Assessments, Assessment Results, and Study Plans. These provide the foundation for reviewing records and building a dashboard/UI page to visualize student performance and learning gaps. Dashboard metrics and automated recommendations should only be reported as completed after they are configured and tested in Zoho Creator.
